

Fen

by Freya North

Calcareous Fen - Wisconsin DNR Fen, type of bog (q.v.), especially a low-lying area, wholly or partly covered with water and dominated by grasslike plants, grasses, sedges, and reeds. In strict usage, a fen denotes an area in which the soil is organic (peaty) and alkaline rather than acid. ?Weirder than any other landscape: a wild walk in the Fens Travel . A fen is a marshy area — a damp, grassy area of ground. If your entire back yard is a fen, you'll want to wear tall rubber boots when you walk your dog. Fen - Home Facebook Fen works with clients who bring everything from product visions to detailed requirements specifications to the table. Speaking in confidence the client shares SAR Datasets / Wetlands MEaSUREs / Wetlands Overview / Fen . The long duration anaerobic conditions limit the decomposition of plant roots, leaves, and stems and over time this organic matter accumulates to form peat soil. Wetlands include the margins of streams and rivers, and the shores of lakes. There are several types of wetlands: swamps, marshes, bogs, and fens. fen - Dictionary Definition : Vocabulary.com What are fens? Like bogs, fens are peat-forming wetlands, but fens are alkaline rather than acidic. Fens receive nutrients from groundwater or mineral-rich What is a Fen? - USDA Forest Service Calcareous Fen page from the Natural Communities of Wisconsin.
